English

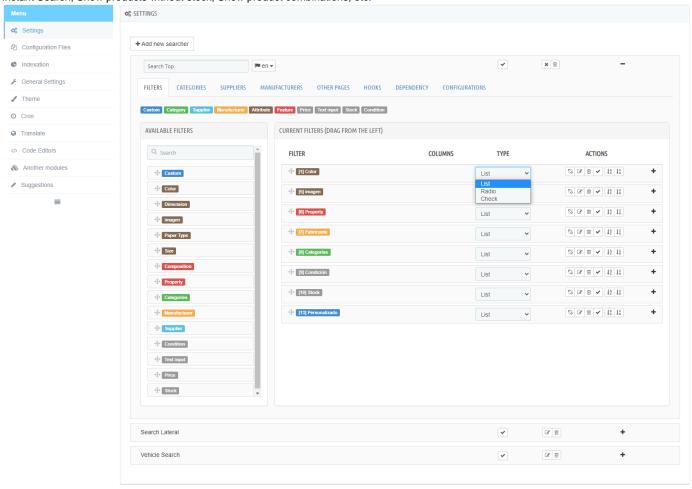

When a user is browsing an online store they always want to find what they need in the shortest time possible. In fact, very few users spend more than 2 minutes searching for the product they want. Now you can take advantage of this fact by integrating **Filter Products Pro** into your store.

This **PrestaShop module** will, in essence, allow you to integrate intelligent filters into your online store. This way any user can find what they need in a matter of seconds. Allow your potential customers to have full access to your product catalog.

Settings

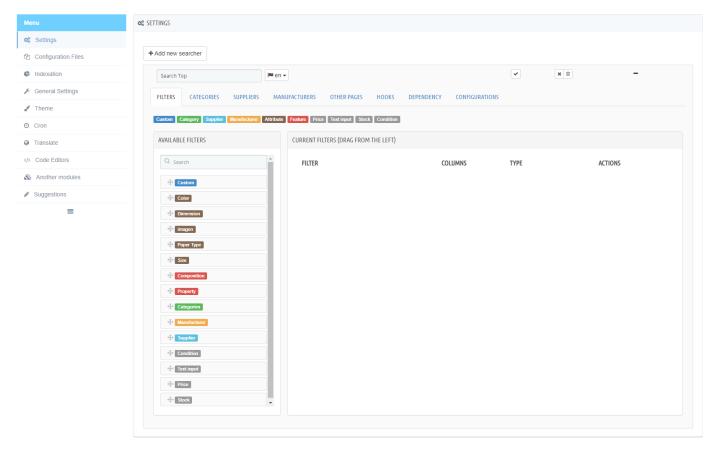

In this option you can create all the search engines you want and add filters (by category, color, manufacturers, suppliers, custom, etc.) with the options you need.

Configure in which categories, suppliers, manufacturers, pages, hook the search engines will be displayed and other settings such as enabling Instant Search, Show products without stock, Show product combinations, etc.

- Add new searcher
- Filters
- Categories
- Suppliers
- Manufacturers
- Other pages
- Hooks_
- Dependency
- Configurations

Add new searcher

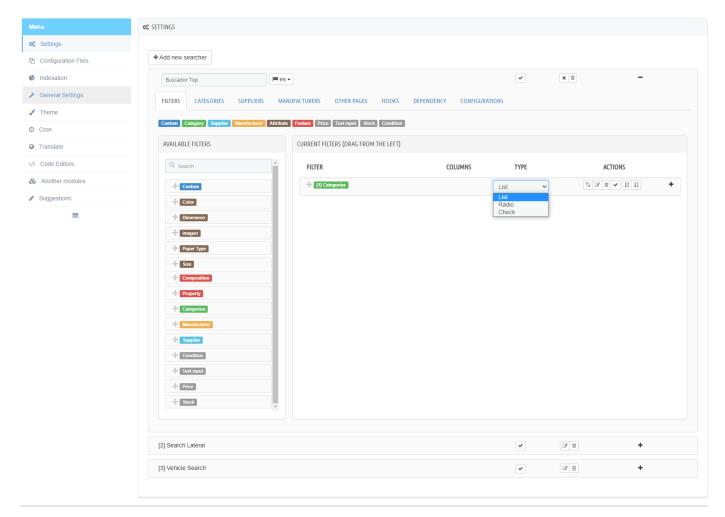

By clicking on this button "Add a new search engine", a default search engine will be created (without any configuration) in which you can configure the filters that will be displayed in the FrontOffice.

In the name of the search engine you can put the name that will appear in the search engine of your store, this value accepts multi-language, by clicking on the flag that appears on the right you can change the language and put the value of the corresponding language.

Filters

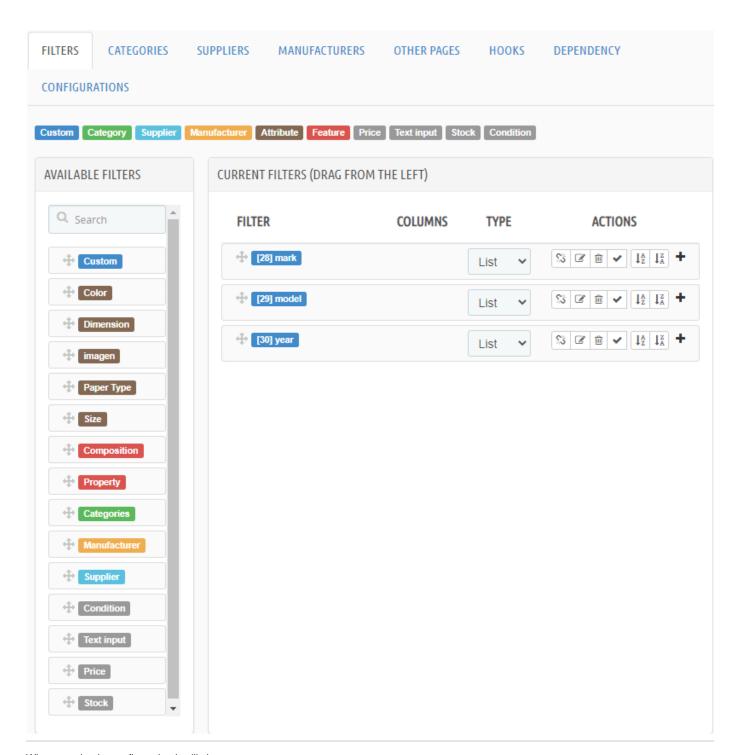

Here you can create all the filters you need for the search engine and add all the options you want. The filters to create for the products can be personalized or by category, supplier, manufacturer, color, shoe size, size, height, width, depth, weight, composition, styles, properties and prices.

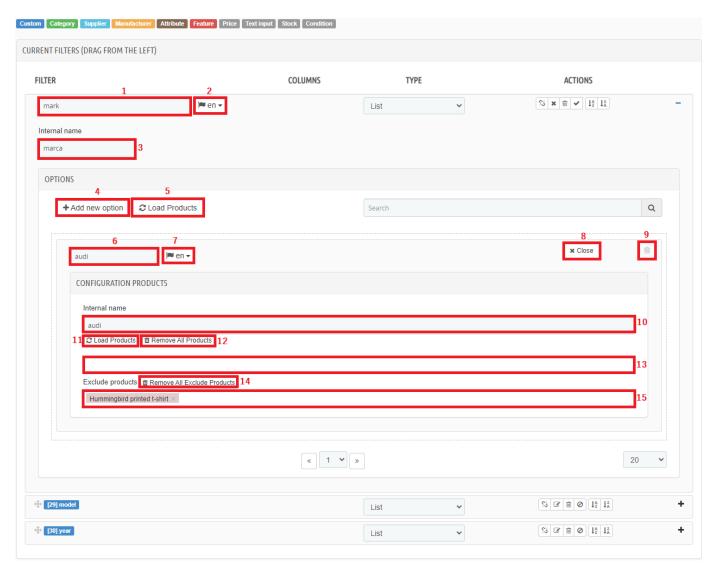

- Custom Filter
- Category Filter
- Provider Filter
- Manufacturer Filter
- Attribute Filter
- Feature Filter
- Price Filter
- Text input Filter
- Stock Filter
- Condition Filter

Custom Filter

This type of filter is used to create options and add products manually.

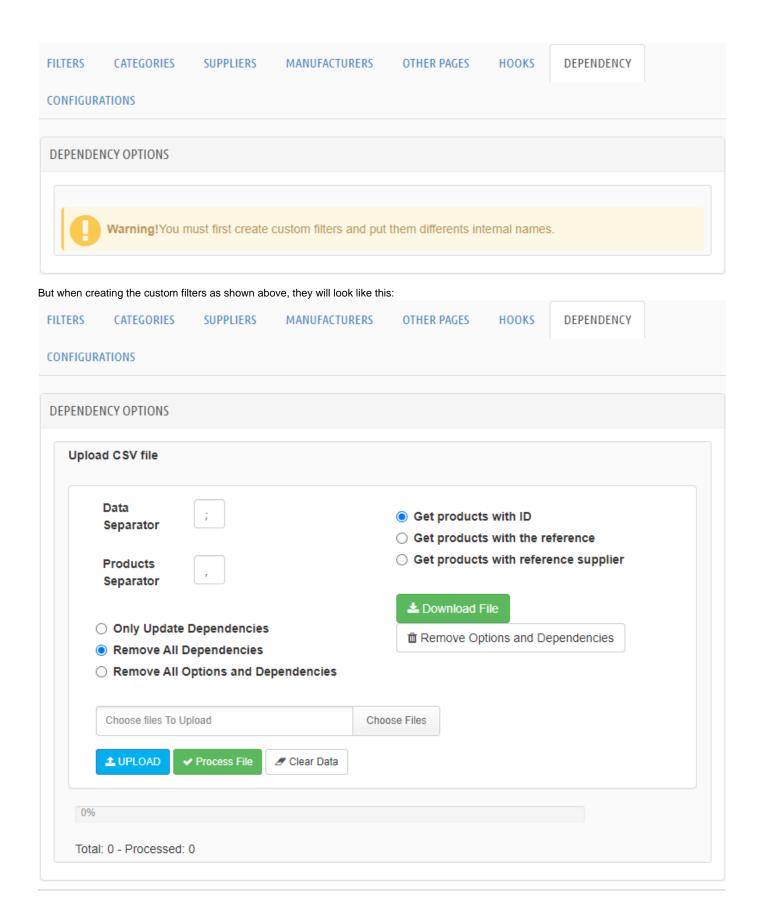

When opening its configuration it will show:

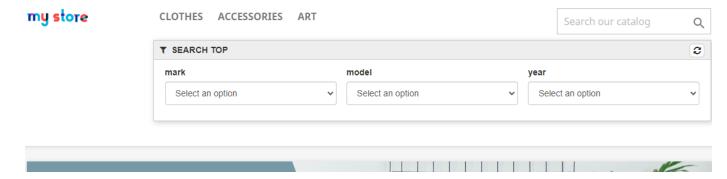

- 1. Filter name: this will appear in the front within the search engine with the options created
- 2. **Filter language:** When you select it, the list of languages configured in the store will appear, when you select one the name field can be filled in with its respective translation.
- 3. Internal filter name: This name is used to identify the column in the dependent filters by CSV.
- 4. Add new option: Clicking will create a new option for the filter.
- 5. Load products: Clicking will load the products for the filter.
- 6. Option name: This will appear in the list of filter options.
- 7. **Option language:** When selected, the list of languages configured in the store will appear, when selecting one the name field can be filled in with its respective translation.
- 8. Close/Modify: Clicking on close will hide the options "CONFIGURE PRODUCT", clicking on modify will show them.
- 9. **Delete option:** Clicking on this button will delete the option and its selected products.
- 10. **Load products:** Clicking on this button will add to point 13 the products that match the value of point 6. a. Keep in mind that it will only take the value of the default language of the store to perform the search. b. This search will not take into account the products of point 15.
- 11. Internal name: It is a unique name, without strange characters and symbols, to make the configuration that is required.
- 12. Delete all products: removes all associated products from the option found in point 13.
- 13. The products associated with the option are displayed. If you write a name of a product in this field, you will get a selectable list of products that match what is written.
 - a. By clicking on the "x" of a product, it will go to the field at point 15.
- 14. Delete all excluded products: by clicking on delete all excluded products found in point 15.
- 15. Excluded products: These products are not taken into account for loading products, by clicking on the "x" of the product or using point 15, the query will take them into account again.

Or to be used to add custom filters with dependency.

At the beginning it appears as follows:

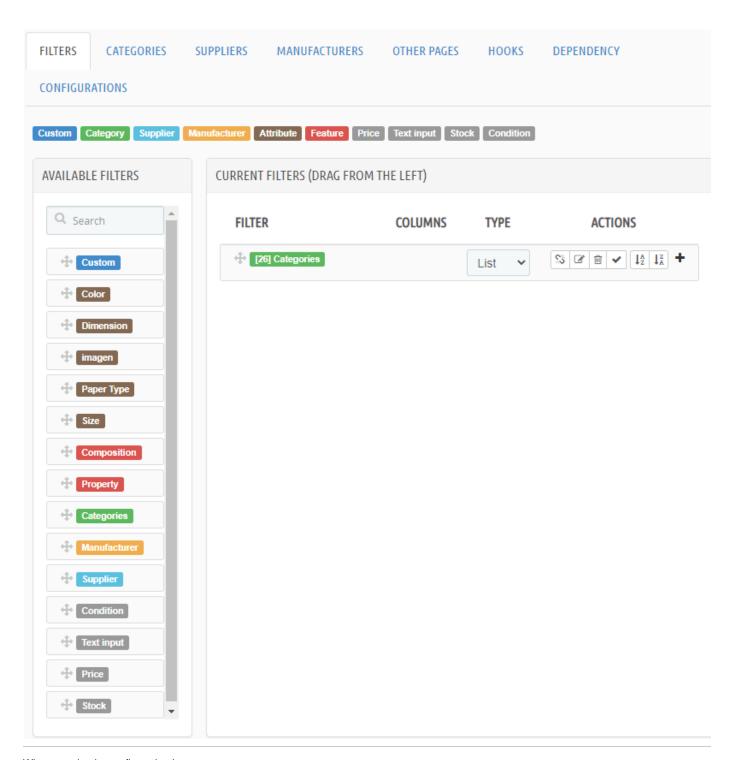

And in the Front Office it will look like this:

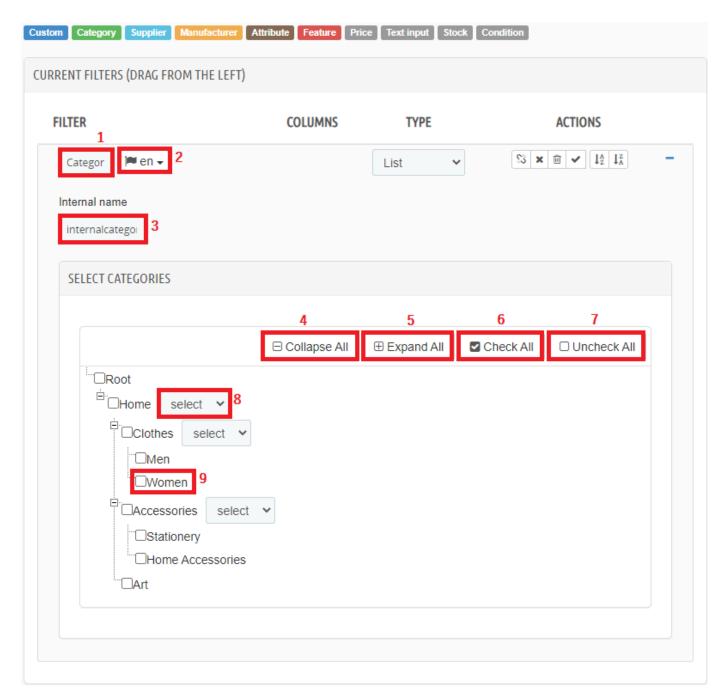

Category Filter

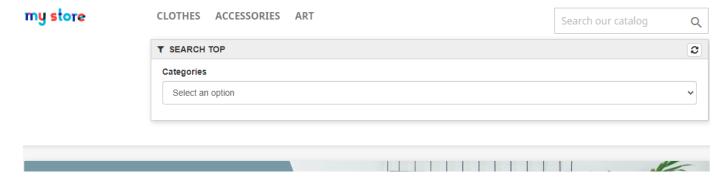

When this filter is added to the search engine, it allows the search engine to filter the products by the categories selected in the filter settings.

When opening its configuration it:

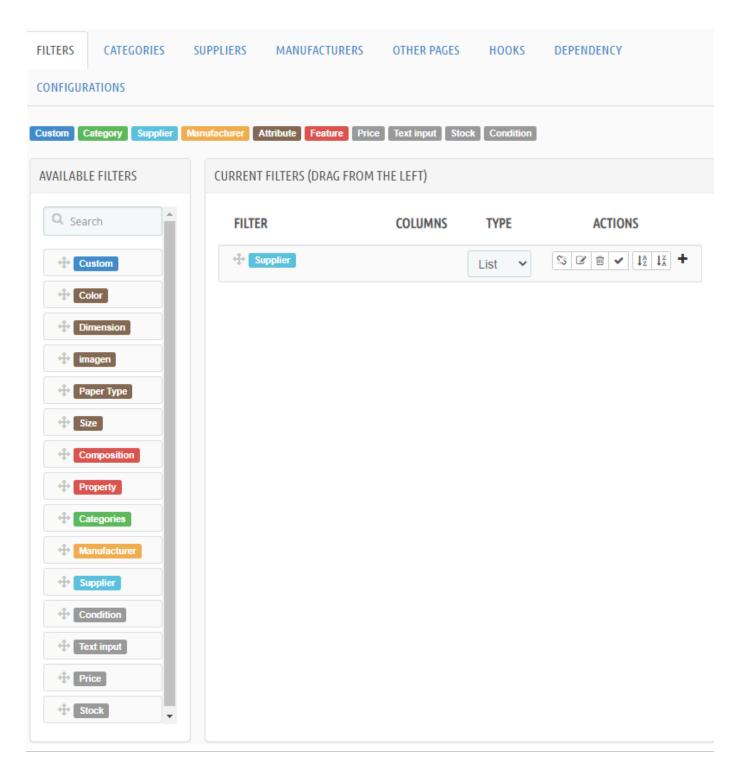

- 1. Filter name: this will appear in the front of the search engine.
- 2. Language: You can select the language and change the translation in the filter name field.
- 3. Internal name: It is a unique name, without strange characters and symbols, to make the configuration that is required.
- 4. Collapse all: It will collapse all the categories in the tree showing only the start node.
- 5. Display all: It will expand the categories tree, showing all the categories of your store
- 6. Mark all: Mark all the categories of your store.
- 7. Unmark all: Unmark all the categories of your store.
- 8. Mark by level: Mark all the subcategories of the selected level, that is, if I select level 1 of Clothes, it will mark Men and Women.
- 9. Categories of your store: you can mark them or not so that they are shown as options of the category filter.

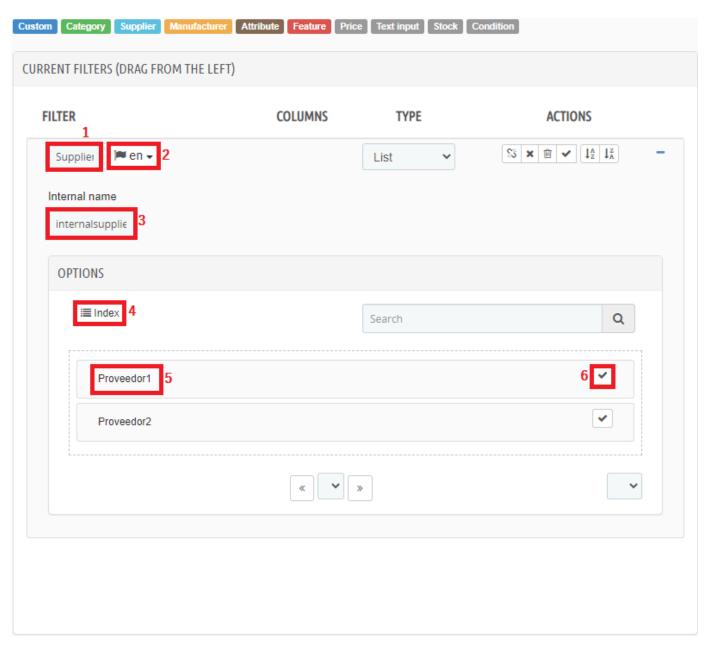

Provider Filter

When this filter is added to the search engine, it allows the search engine to filter the products by the providers configured in the products.

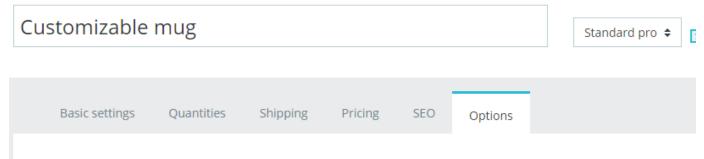

When opening its configuration it will show:

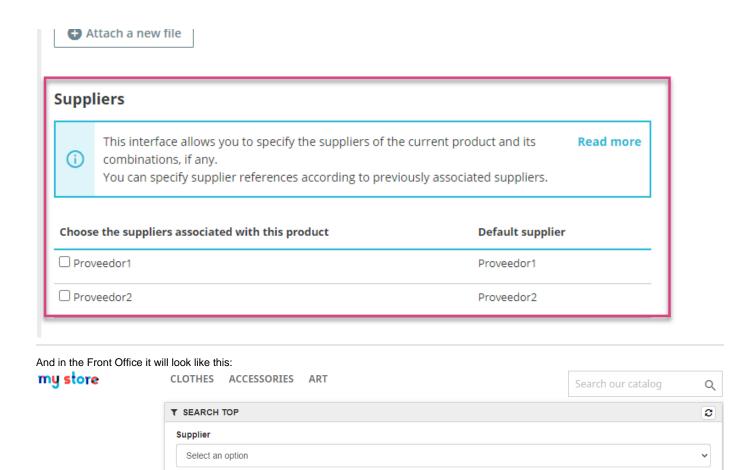

- 1. Filter name: this will appear in the front of the search engine.
- 2. Language: You can select the language and change the translation in the filter name field.
- 3. Internal name: It is a unique name, without strange characters and symbols, to make the configuration that is required.
- 4. **Index:** Sometimes when creating and deleting providers these are not reflected as options, when clicking on this button, the module will search for updates to these values.
- 5. **Options:** These are the options that the filter will show in the front office, you can change their position to change the order in which they will be displayed.
- 6. Activate/Deactivate: You can click this button so that the option is displayed or not in the front office.

For the search engine to show a product by supplier, it must be configured in the product file, Catalog tab Products Options, Suppliers section.

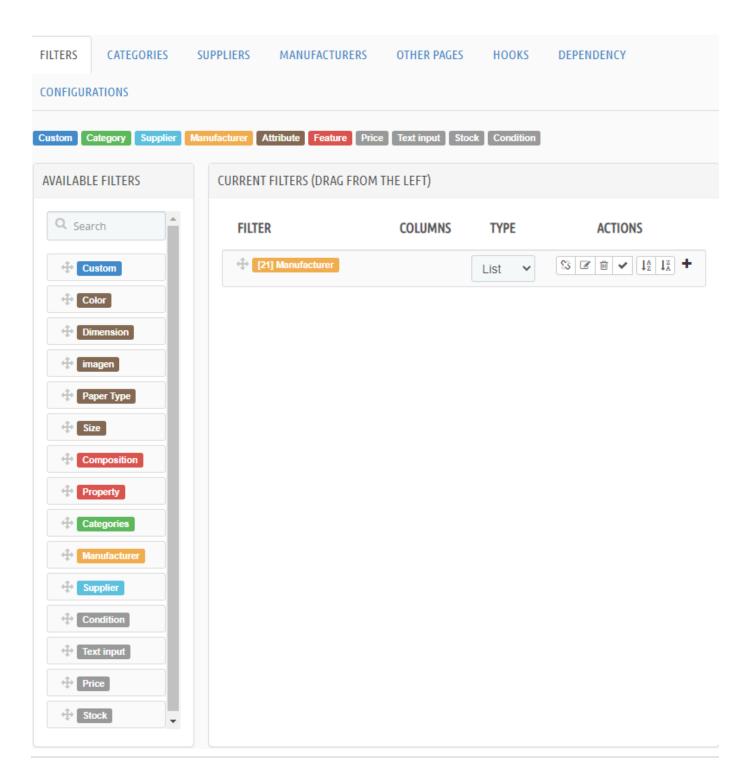

Visibility Where do you want your product to appear? **‡** Everywhere Available for order ☐ Web only (not sold in your retail store) Tags Use a comma to create separate tags. E.g.: dress, cotton, party dresses. (i) Tags facilitate the product search for customers using the search bar. Read more **Condition & References** Condition [7] ☐ Display condition on product page New ISBN ? EAN-13 or JAN barcode 📳 UPC barcode 🔃 MPN ? Customization Customers can personalize the product by entering some text or by providing custom image files. Label Type Required Type your text here Text Add a customization field Attached files Select the files (instructions, documentation, recipes, etc.) your customers can directly download on this product page. Need to browse all files? Go to Catalog > Files There is no attachment yet.

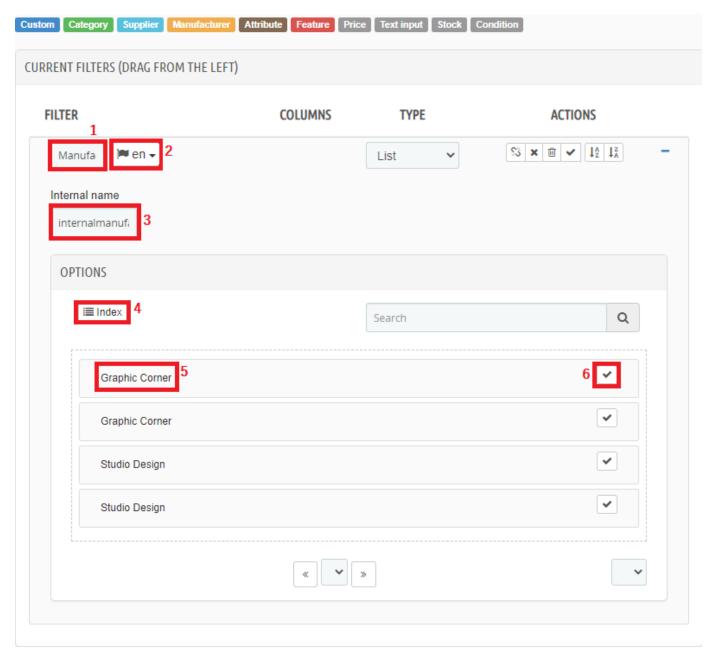

Manufacturer Filter

When this filter is added to the search engine, it allows the search engine to filter the products by their manufacturers.

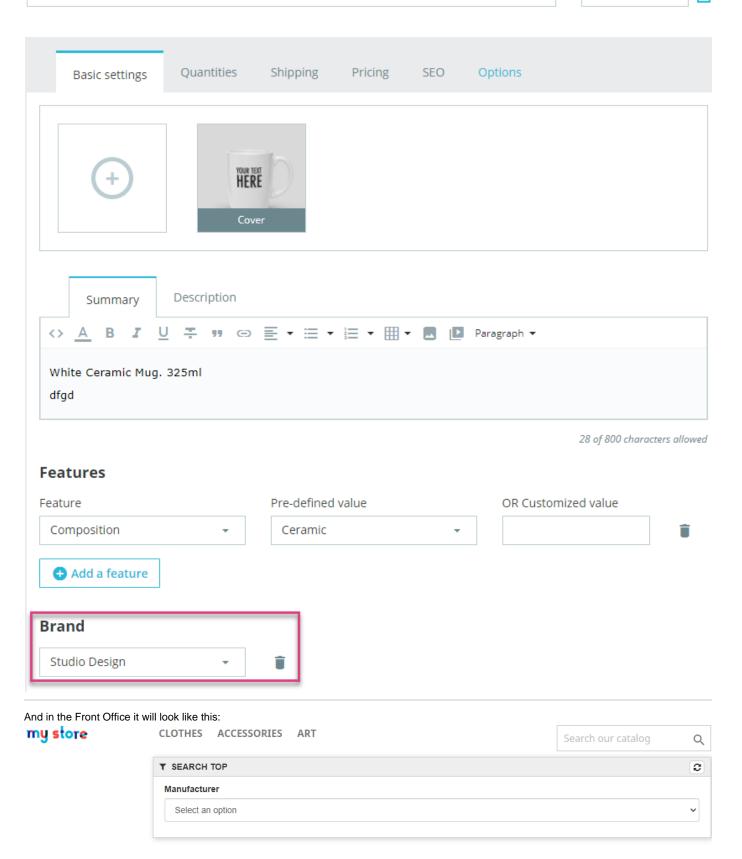

When opening its configuration it will show:

- 1. **Filter name:** this will appear in the front of the search engine.
- 2. Language: You can select the language and change the translation in the filter name field.
- 3. Internal name: It is a unique name, without strange characters and symbols, to make the configuration that is required.
- 4. **Index:** Sometimes when creating and deleting manufacturers these are not reflected as options, when clicking on this button, the module will search for updates to these values.
- 5. **Options:** These are the options that the filter will show in the front office, you can change their position to change the order in which they will be displayed.
- 6. Activate/Deactivate: You can click this button so that the option is displayed or not in the front office.

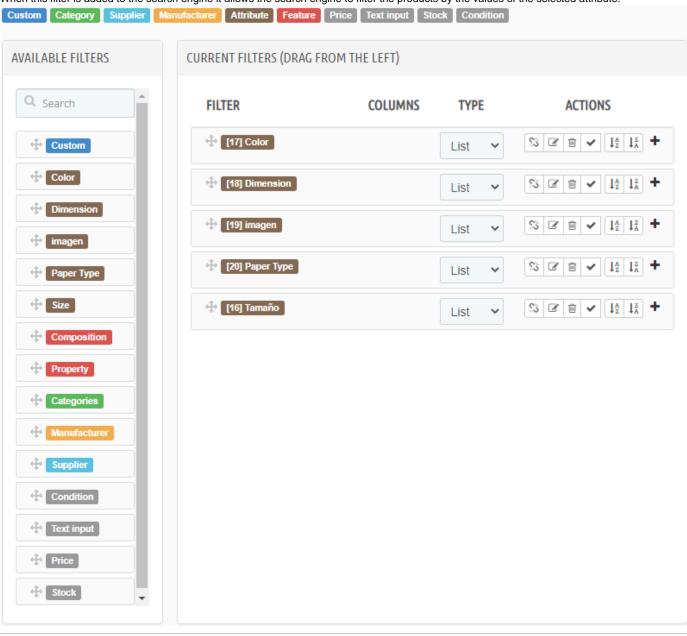

For the search engine to show a product by manufacturer, it must be configured in the product file, Catalog tab Products Basic Settings, Brand section.

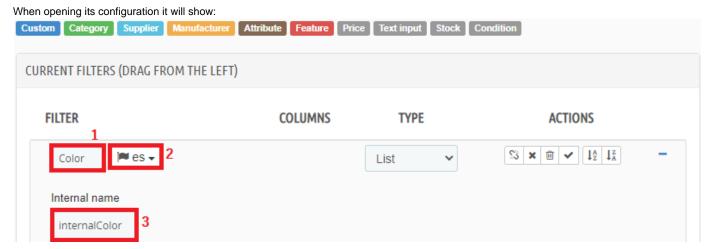

Customizable mug

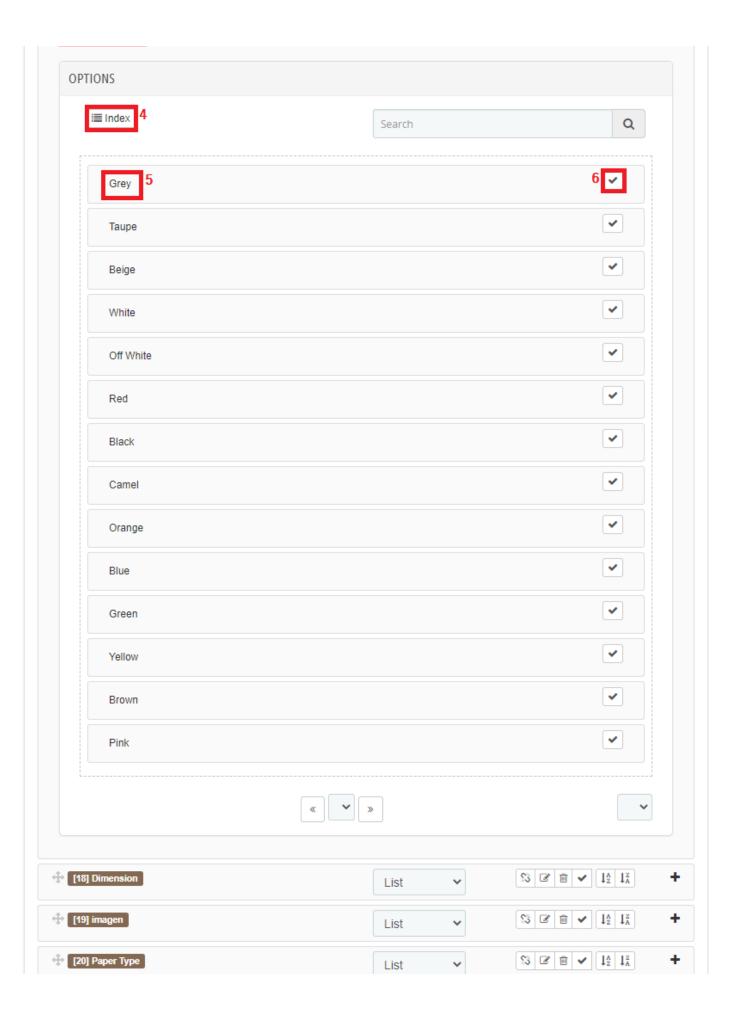

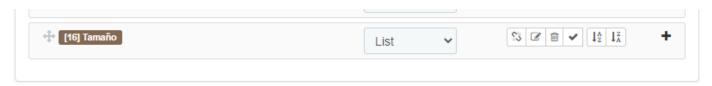

Attribute Filter

When this filter is added to the search engine it allows the search engine to filter the products by the values of the selected attribute.

- 1. Filter name: this will appear in the front of the search engine.
- 2. Language: You can select the language and change the translation in the filter name field.
- 3. Internal name: It is a unique name, without strange characters and symbols, to make the configuration that is required.
- 4. **Index:** Sometimes when creating and deleting attributes and attribute values these are not reflected as options, when clicking on this button, the module will search for updates of these values.
- 5. **Options:** These are the options that the filter will show in the front office, you can change their position to change the order in which they will be displayed.
- 6. Activate / Deactivate: You can click this button so that the option is displayed or not in the front office.

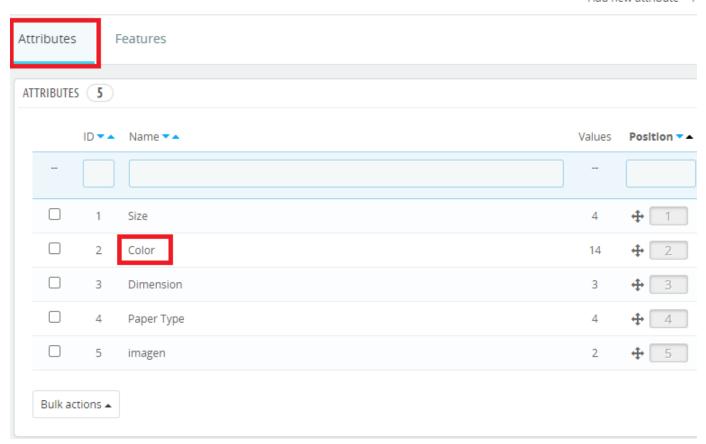

The available attributes will be found in the PrestaShop Backoffice, in the Catalog tab Attributes and Features Attributes.

Attributes & Features / Attributes

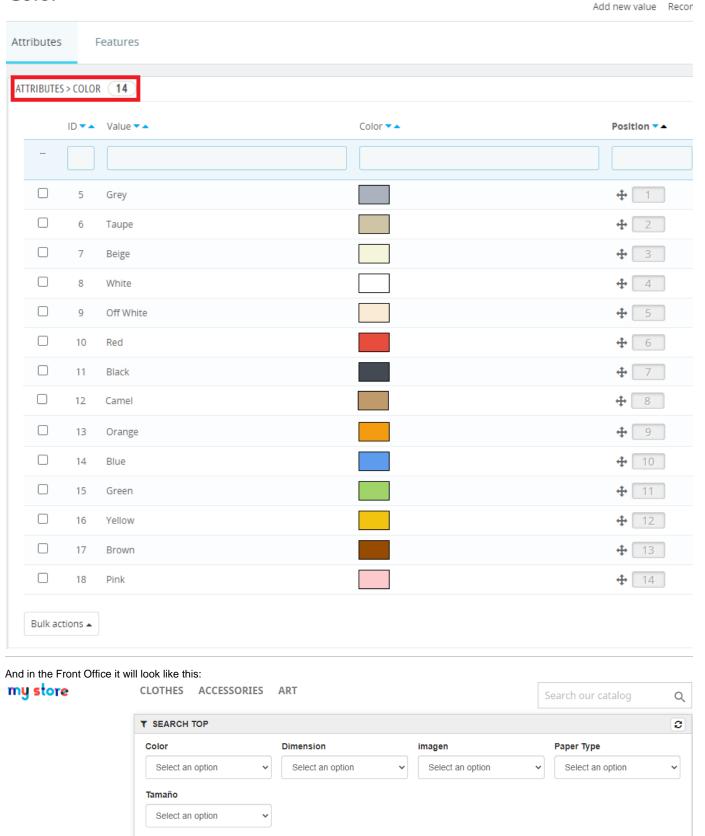

Attributes

Add new attribute A

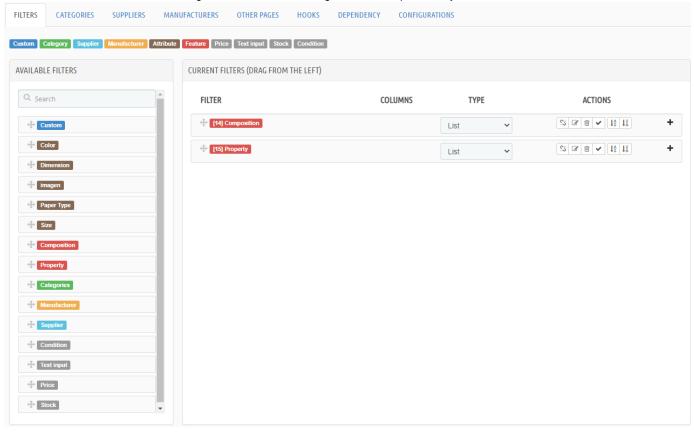

And your attribute values will be your options:

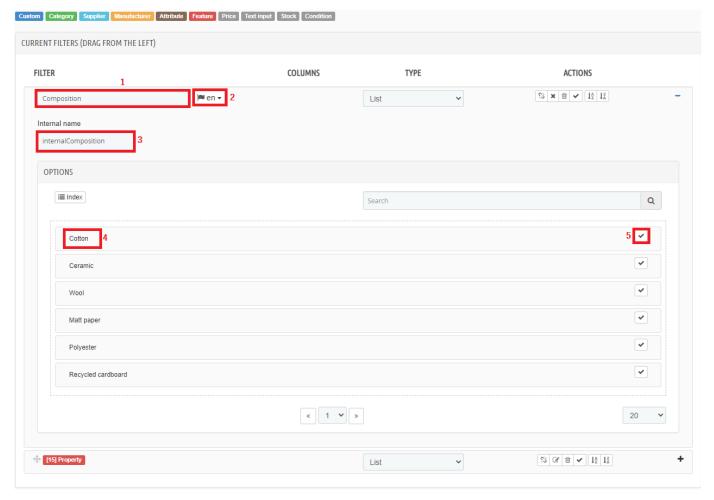

Feature Filter

When this filter is added to the search engine it allows the search engine to filter the products by the values of the selected characteristic.

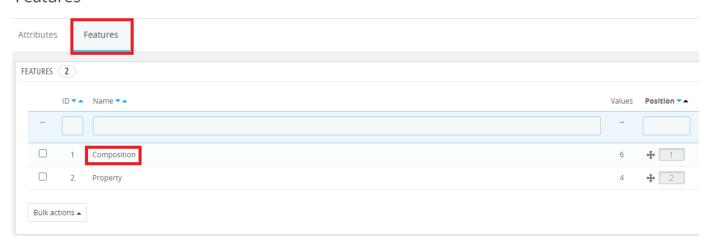

When opening its configuration it will show:

- 1. Filter name: this will appear in the front of the search engine.
- 2. Language: You can select the language and change the translation in the filter name field.
- 3. Internal name: It is a unique name, without strange characters and symbols, to make the configuration that is required.
- 4. **Index:** Sometimes when creating and deleting characteristics and characteristic values these are not reflected as options, when clicking on this button, the module will search for updates of these values.
- 5. **Options:** These are the options that the filter will show in the front office, you can change their position to change the order in which they will be displayed.
- 6. Activate / Deactivate: You can click this button so that the option is displayed or not in the front office.

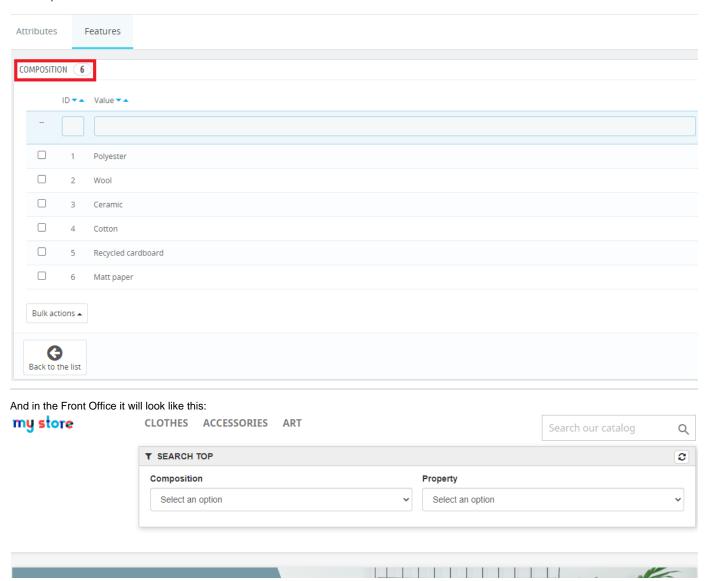

The available attributes will be found in the PrestaShop Backoffice, in the "Catalog" tab Attributes and Features Features.

Features

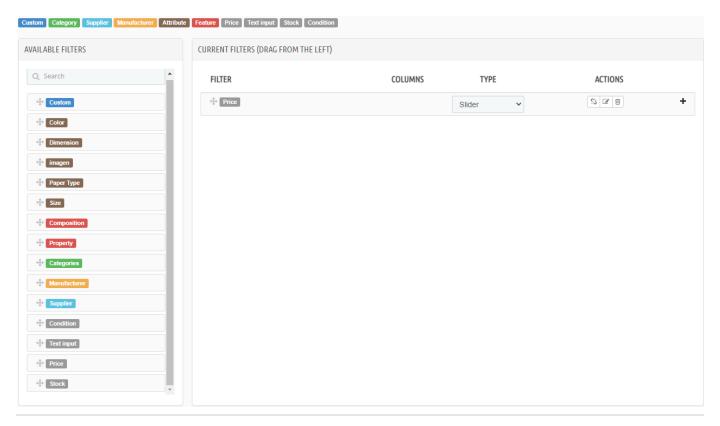

And your characteristic values will be your options:

Composition

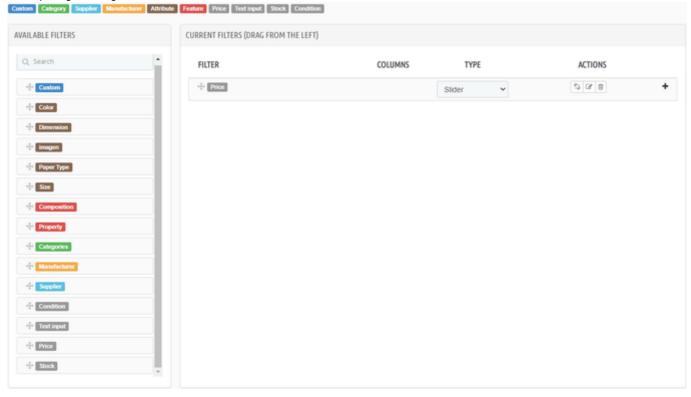

Price Filter

When this filter is added to the search engine, it allows the search engine to filter by the price of the products.

When opening its configuration it will show:

- 1. Filter name: this will appear in the front of the search engine.
- Language: You can select the language and change the translation in the filter name field.
 Internal name: It is a unique name, without strange characters and symbols, to make the configuration that is required.

And in the Front Office it will look like this:

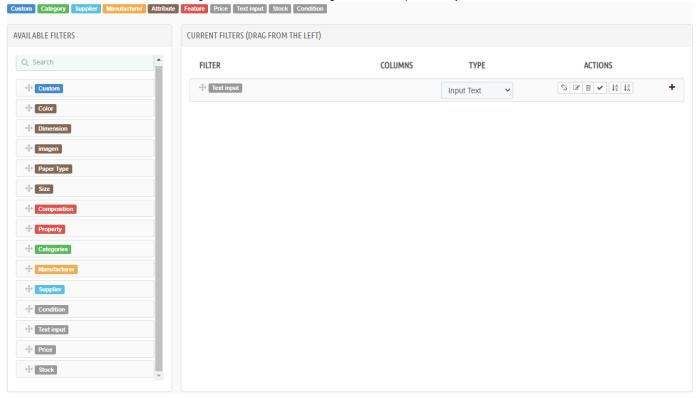

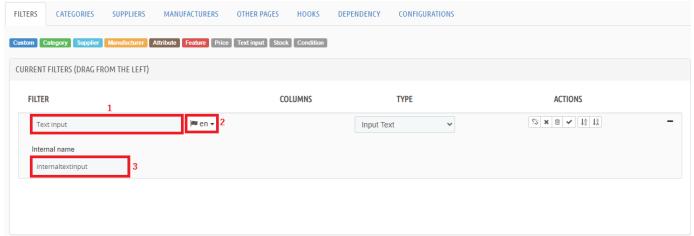

Text input Filter

When this filter is added to the search engine, it allows the search engine to filter the products by the text entered.

When opening its configuration it will show:

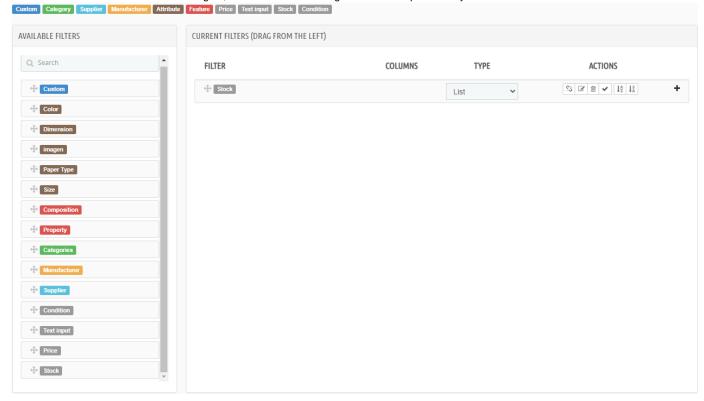

- 1. Filter name: this will appear in the front of the search engine.
- 2. Language: You can select the language and change the translation in the filter name field.
- 3. Internal name: It is a unique name, without strange characters and symbols, to make the configuration that is required.

And it will look like this in the Front Office:

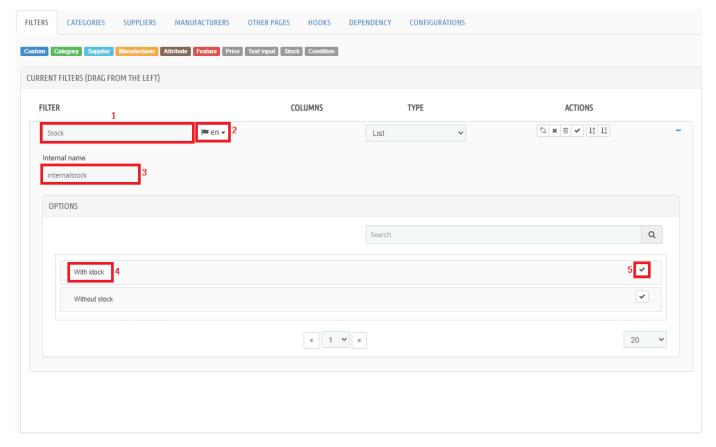

my store CLOTHES ACCESSORIES ART Search our catalog Q ▼ SEARCH TOP C Caja de texto Enter a keyword

Stock Filter

When this filter is added to the search engine, it allows the search engine to filter the products by their stock.

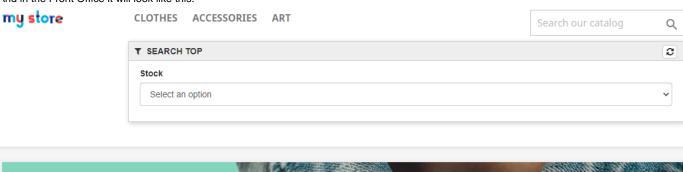

When opening its configuration it will show:

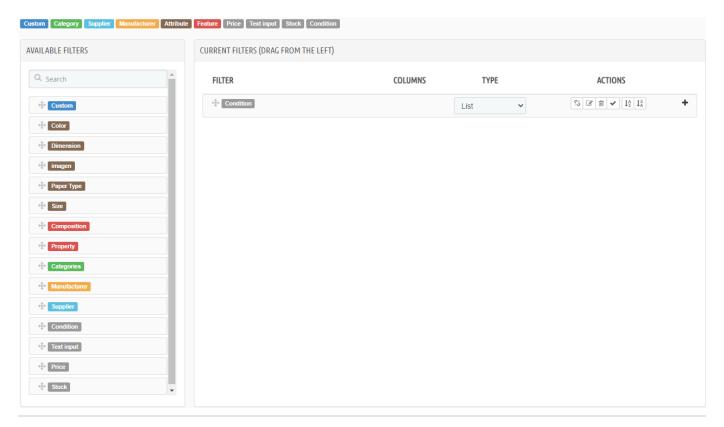

- 1. Filter name: this will appear in the front of the search engine.
- 2. Language: You can select the language and change the translation in the filter name field.
- 3. Internal name: It is a unique name, without strange characters and symbols, to make the configuration that is required.
- 4. **Options:** These are the options that the filter will show in the front office, you can change their position to change the order in which they will be displayed.
- 5. Activate / Deactivate: You can click this button so that the option is displayed or not in the front office.

And in the Front Office it will look like this:

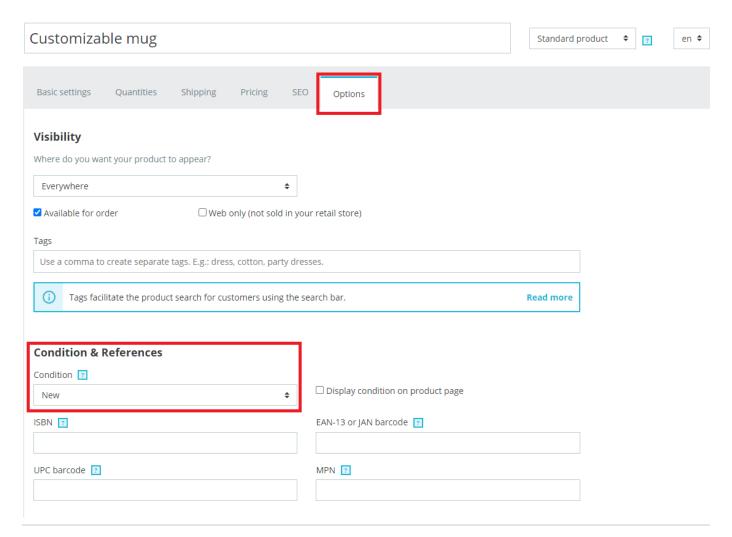

Condition Filter

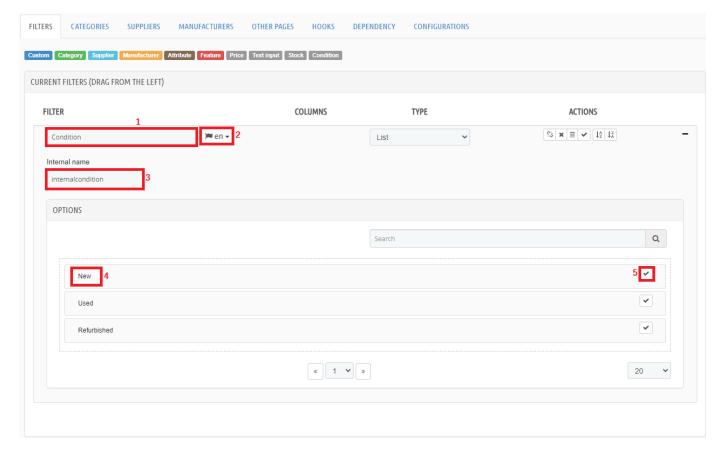

When this filter is added to the search engine, it allows the search engine to filter the products by their status.

In order for the search engine to show a product by state, it must be configured in the **product file**, "Options" tab "Condition and References" section.

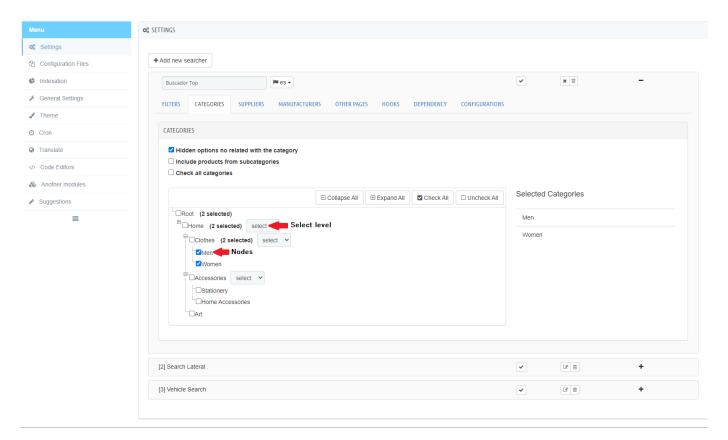

When opening its configuration it will show:

- 1. Filter name: this will appear in the front of the search engine.
- 2. Language: You can select the language and change the translation in the filter name field.
- 3. Internal name: It is a unique name, without strange characters and symbols, to make the configuration that is required.
- 4. **Options:** These are the options that the filter will show in the front office, you can change their position to change the order in which they will be displayed.
- 5. Activate / Deactivate: You can click this button so that the option is displayed or not in the front office.

Categories

This tab is used to configure in which categories the search engine will be displayed.

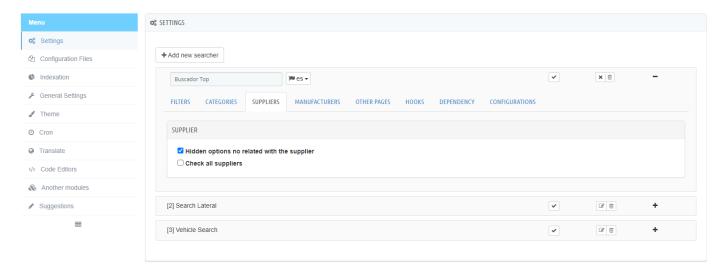

- 1. Hide options not related to the category: When this option is active, it will only filter on the products of the current category the search engine is in, otherwise it will only filter on all the products in the store.
- 2. **Include products from subcategories:** When this option is active, it will filter on the products of the current subcategory in which the search engine is located, otherwise it will only filter by the products of the category in case of having option 1 active.
- 3. Select all categories: When this option is active, the search engine will be shown in all the categories of your store.
- 4. **Collapse all:** Collapse the category tree and only show the home category
- 5. Display all: Expands the category tree and shows all the categories of the stores with their subcategories
- 6. Mark all: Mark all the categories of your store so that the search engine is displayed
- 7. Unmark all: Unmark all the categories of your store and in this case the search engine will not be shown in any category.
- 8. Selected categories: Shows the selected categories in the category tree.
- Select level: When selecting a level, all the categories of the selected level will be marked, that is, if I select level 1 of Clothes, it will mark Men, Women and test.
- 10. **Nodes:** These are the categories of your store, allow you to mark it to show the search engine in this category or mark it so that it is not displayed in this category of your store.

Suppliers

Configure the provider (s) for which the search engine is to be displayed.

- If you do not select a provider, the search engine will show up on all providers.
 - Option **Hide options not related to the provider**: If you enable this option, search engine options that do not contain products from the configured provider will be hidden.
 - Select all providers option: If you enable this option, all providers will be selected.

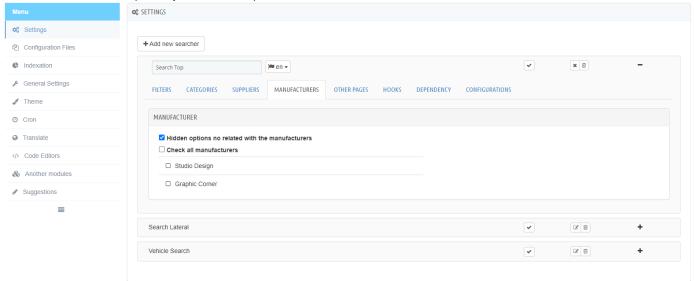

Manufacturers

Configure the manufacturer (s) for which the search engine is to be displayed.

If you don't select a manufacturer, the search engine will show up on all manufacturers.

Option **Hide options not related to the manufacturer**: If you enable this option, the options of the search engine that do not contain products of the configured manufacturer will be hidden.

Select all manufacturers option: If you enable this option, all manufacturers will be selected.

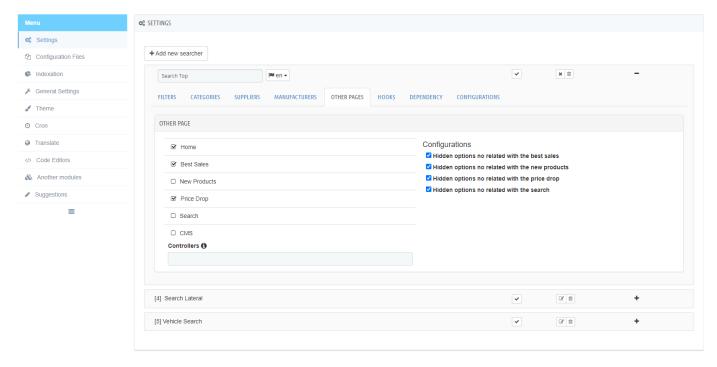

Other pages

Configure the page (s) where you want to display the search engine.

If you don't select a page, the search engine will show up on all pages.

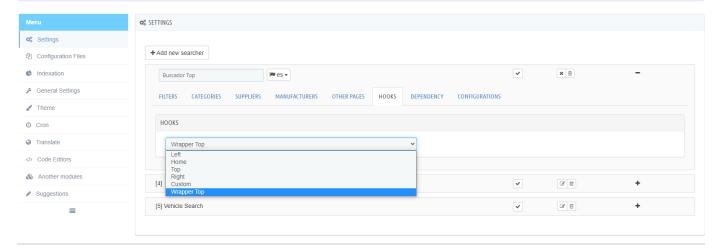

Option **Hide options not related to ...**: If you enable this option, search engine options that do not contain products of the configured page (s) will be hidden.

Hooks_

Configure the hook where you want to show the search engine.

If you don't select an option, the search engine is shown in the hookTop (at the top of the store).

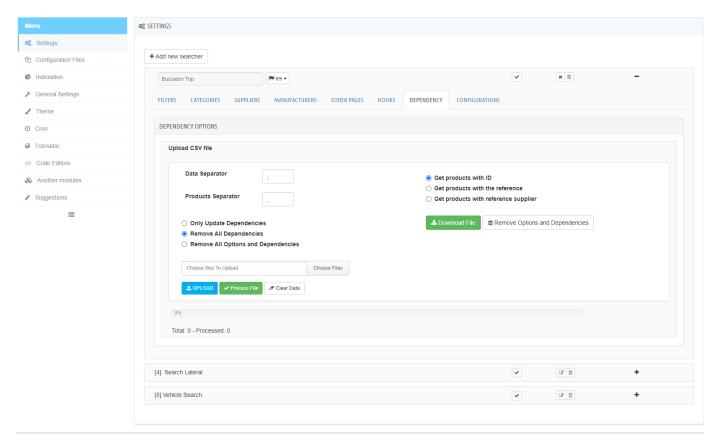

To place the search engine in a custom position, you must place the following code in the template that you want to display it:

{hook h = 'filterproductspro'}

Dependency

Configure dependencies for custom filters.

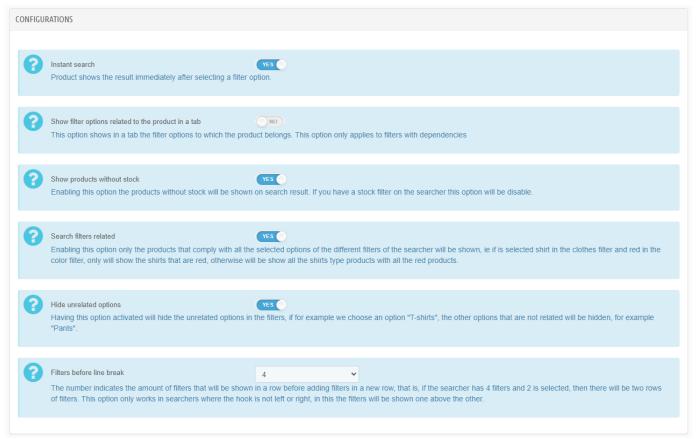

Example: If you have two custom filters created (make and model), in this section you can relate the models to the created brands.

Dependency options

- Upload CSV file: This option allows you to upload a csv file with the dependencies of the custom filters:
- Data separator: Separate the csv columns by the value entered in this option.
- Product separator: Enter the separator for the products in ids_product (in this option you can enter more than one product).
- Only update dependencies: If you select this option, the new dependencies are created and the existing ones are updated.
- Eliminate all dependencies: If you select this option, the new dependencies uploaded in the csv will be created but the other existing dependencies will be eliminated.
- Delete all options and dependencies: Delete the existing options and dependencies and create the new dependencies and options uploaded in the csv file.
 - Download file: Download a csv file with the dependencies created and the products associated with those dependencies.
 - Remove options and dependencies: Remove all existing dependencies and their options.

Configurations

Here you can make general settings on the search engine.

- Instant search
- Show filter options related to the product in a tab
- Show products without stock
- Search filters related
- Show related options
- Filters before line break

Instant search

Product shows the result immediately after selecting a filter option.

Show filter options related to the product in a tab

This option shows in a tab the filter options to which the product belongs. This option only applies to filters with dependencies.

Show products without stock

Enabling this option the products without stock will be shown on search result. If you have a stock filter on the searcher this option will be disabled.

Search filters related

Enabling this option only the products that comply with all the selected options of the different filters of the searcher will be shown, ie if is selected shirt in the clothes filter and red in the color filter, only will show the shirts that are red, otherwise will be show all the shirts type products with all red products.

Show related options

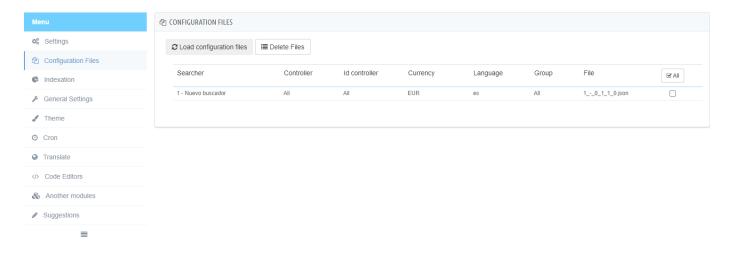

Enabling this option allows to show filter options that have associated common products, ie if the shirt is selected in the clothes filter, in the color filter only will show the colors of the shirt type products. Otherwise, always all options will been shown. Only options that have associated products will be shown.

Filters before line break

The number indicates the amount of filters that will be shown in a row before adding filters in a new row, that is, if the searcher has 4 filters and 2 is selected, then there will be two rows of filters. This option only works in searchers where the hook is not left or right, in this the filters will be shown one above the other.

Configuration Files

In this section you can find the products to which some changes have been made to the information.

When there are no configuration files, this warning appears:

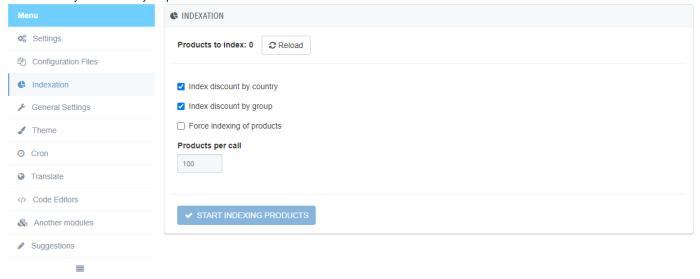

Warning! There are no configuration files

- Load configuration files: Obtains the files generated by entering the product list pages, these files allow the loading of these pages to be faster after being visited for the first time.
- Delete files: Delete the configuration files that were automatically generated on the product listing pages.

Indexation

In this section you can index your products.

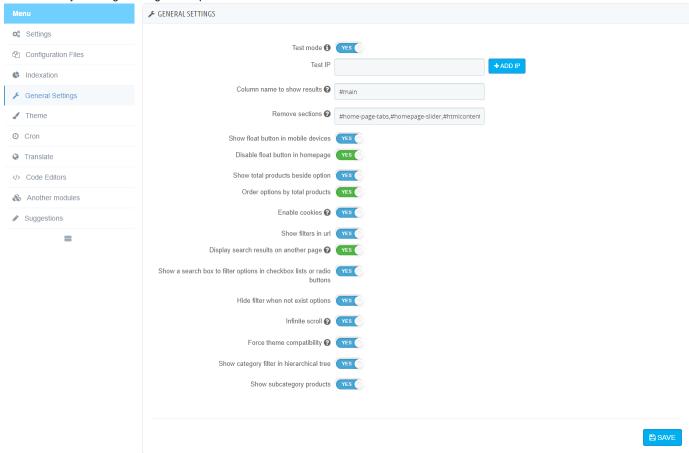

- Index discount by country: With this checkbox there is no need to consult PrestaShop, an index is made of all the possibilities by
 country and by currency of all groups in each country (the value with the discount for that country is saved, at the moment searching for
 them shows a certain price). Select this option if you manage prices by country in your products. Otherwise, uncheck this option to make
 the indexing process faster.
- Index discount by group: With this checkbox there is no need to consult in PrestaShop, an indexing of all the possibilities is made by customer group and by currency of all groups in each customer group (the value with the discount is saved for that customer group, when searching for them a certain price is shown). Select this option if you manage prices by customer group in your products. Otherwise, uncheck this option to make the indexing process faster.
- Force indexing of products: If you want to re-index the products, with this checkbox you can do it, it is enabled after reloading the page.
- Products per call: Number of products that are indexed for each Ajax call.

- Depending on the server, the process may crash with a high number.
 - START INDEXING PRODUCTS: Calculate prices and save them in the database so that the search by price is faster.

General Settings

In this section you configure the general options for the filters.

- Test mode
- Column name to show results
- Remove sections
- Show float button in mobile devices
- Show total products beside option
- Enable cookies
- Show filters in url
- · Show a search box to filter options in checkbox lists or radio buttons
- Hide filter when not exist options
- Infinite scroll
- Force theme compatibility
- Show category filter in hierarchical tree
- Show subcategory products

Test mode

By enabling this option, the filter will not be visible in FrontOffice.

Furthermore, when you enable the "Test mode" option, a new "IP" text field will appear in which you should enter the IP (s) for which the module will be enabled. The module will be disabled for the IP's that have not been saved.

1 It is recommended that you enable this option to test the module in your store before enabling it for customers.

With the option "Test mode" you can do the following:

- By clicking on the "Add IP" button you add the IP of your PC.
- If you don't have an IP added or you don't have your IP added, the filter will not be displayed in FrontOffice for your clients.
- If you have added an IP from another PC or your IP, the filter can only be seen for the IPs added in the FrontOffice.

Column name to show results

Modify only if the developers tell you.

In this text field you must enter the selector of the container in which the products resulting from the filter made by the customer will be displayed. Remove sections

Modify only if the developers indicate it.

In this text field you must enter the css selectors to remove page sections in order to display the search engine on special pages.

Show float button in mobile devices

Shows the total of products found next to the selected filter option. When you enable this option, a new Sort options by product total field will appear, which you can enable or disable as desired.

Show total products beside option

When the customer changes the page or clicks on a product in the results, the options selected in the search engine will continue to be maintained.

Enable cookies

When the customer changes the page or clicks on a product in the results, the options selected in the search engine will continue to be maintained.

Show filters in url

If you enable this option, the filters selected in the search engine are displayed in the URL. Additionally, a new Show search results on another page will appear, which you can enable or disable as you wish.

For this option to work, the search engine must have the Instant Search option disabled.

Show a search box to filter options in checkbox lists or radio buttons

Displays a search box to filter options in checkbox lists or radio buttons.

Hide filter when not exist options

If you enable this option, filters that do not have any options will not be displayed in Front Office.

Infinite scroll

If you enable this option, you will not have to go to the next page (selecting page by page) but only by scrolling it will automatically display the following pages.

Force theme compatibility

Enable this option when search results are not displaying correctly or items such as pagination or sorting are not working.

Show category filter in hierarchical tree

If you enable this option, the filter options by category will be displayed as a hierarchical tree in the FrontOffice.

Show subcategory products

If you enable this option and you are within a PrestaShop category and it does not have products in its category, but within the child categories, then it shows the products. Example: I am in the category "Televisions" but no product is marked in this category, but within its daughters, for example "49 inches", no products will be displayed in the category "Televisions", but if you mark the option then if you are going to show the child products or subcategories.

Theme

You can change the colors of the module providing a better customization of the filter to your clients. Also applies to filter icon on mobile. ✓ THEME **♥** Settings Searcher title background color #e030c4 Configuration Files Searcher title text color Indexation General Settings Searcher title icon color Selected option background color O Cron Selected option border color Translate Selected option text color </>

It only accepts fonts installed in your store or the default fonts of browsers, fonts must be separated by commas. For more information, visit: https://www.w3schools.com/cssref/pr_font_font_family.asp

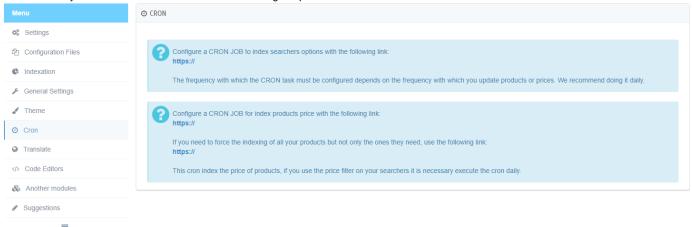

It only accepts valid values for css that represent the font size. For more information, visit: https://www.w3schools.com/cssref/pr_font_font_size.asp

Font weight

It only accepts valid values for css that represent the weight of the font. For more information, visit: https://www.w3schools.com/cssref /pr_font_weight.asp

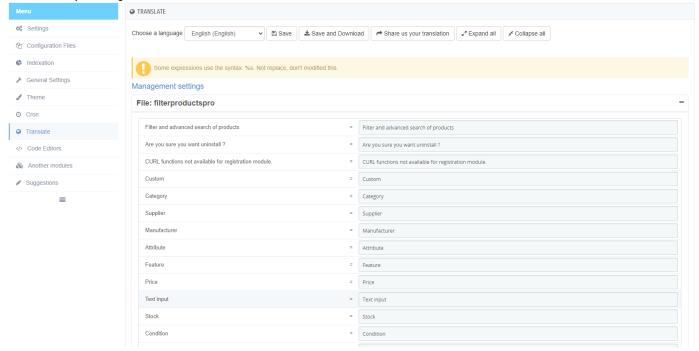

CRON

In this section you will find the URL of the cron for indexing the products that have been modified.

Translate

In this section you configure the translations of the module.

Choose a language

In this drop-down list select the language to translate. After selecting an option, the forms in each module file will be filled with the previously saved values. If no values are found, the form fields will be blank.

Save

This button allows you to save the translation made.

Save and Download

This button allows you to save and download a .php file with the translation done.

Share us your translation

By clicking on this button, the translation into the language selected in the Choose a language option is sent to us.

If you share your translation with us, we will take it into account for future module updates.

Expand all

This button allows you to expand the files on this page.

Collapse all

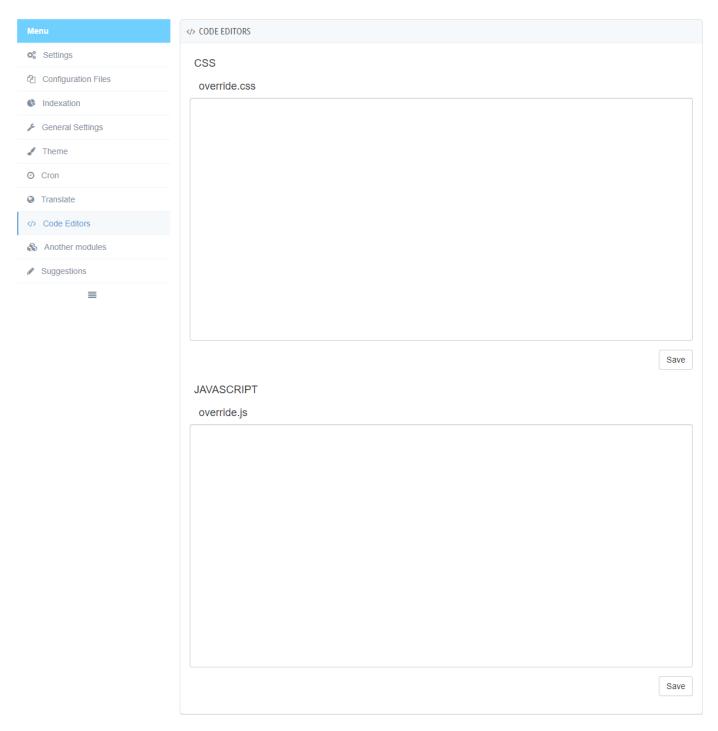

This button allows you to collapse the files on this page.

Code Editors

This section is exclusively for personnel with computer skills. Adding codes without knowing what to do can affect the operation of the module and the store.

In this section you can add or modify CSS and JavaScript code to perform overwriting without the need to directly edit files via FTP.

Another modules

In this section you will be able to know the other modules that we have at your disposal to improve and increase the functionalities of your PrestaShop online store.

Suggestions

This section allows you to communicate with us either to report problems and tell us your questions or to share with us your suggestions, features and opinions about the module.
